Community Park - Softball Field

City of Palos Heights, Illinois

Batter up girls!

The need for an additional girls softball field brought the City of Palos Heights to seek out assistance from Upland Design. The project was on a fast track from 2009 winter design to 2010 spring construction so that summer play would be on! Upland Design developed plans and construction documents for the bidding and construction of the new softball field at Community Park.

The project included skinned infield, backstop, protective fencing, player seating, bleachers, concrete paving and accessible routes to and from the field. The outfield continues to be used as a soccer field for maximum play. The project was deemed a success when the girls played their first game in the summer of 2010!
